ASTHMA GUIDELINES FOR PULSE OXIMETRY: PEDIATRICS
For use in patients with acute respiratory disease/asthma with or without supplemental oxygen need

Other information:
- These are default indications, physician/practitioner may write orders requesting different parameters
- For active children requiring continuous oximetry, consider serial spot oximetry as an alternative
- If patient has chronic respiratory disease and supplemental oxygen requirement, once he/she is at baseline supplemental oxygen need, spot oximetry can be performed using above parameters
