Purpose/Goals:
This clinical conference is designed to create a cardiovascular awareness for the primary care physician and to update and involve registered nurses and other practitioners in the contemporary management of the cardiac patient, including heart failure patient management, atrial fibrillation management and updates in interventional cardiology as well as preventive cardiology. It will provide participants with presentations of trial data, clinical experience by experts in the fields, and an opportunity for peer-to-peer interaction. It will highlight case study reviews to provide a practice-oriented approach to treatment and management of the cardiac patient, targeted at improving patient outcomes.

Target Audience:
Primary & Specialty Care Providers, Emergency Physicians, Mid-Level Providers, Residents, Fellows, Registered Nurses, Nuclear Medicine Technicians, Cath Lab Staff.

Objectives:
Upon completion of this activity the participant will be able to:

- Recognize the latest developments in the field of heart disease diagnosis and management
- Identify the pharmacological and heart failure device advances available in the treatment of heart failure patients in a variety of patient populations
- Relate the most current practice guidelines and be able to further risk stratify their heart failure patients for candidate selection for device indications including cardiac resynchronization therapy
- Describe how to manage a patient PVC’s, atrial fibrillation, and ensure proper usage of anticoagulants and anti-platelet medications
- Utilize treatment plans, medications, and the best approach to manage these patients case by case
